The Reproductive System

Male reproductive system

- The main reproductive organ in males is a pair of testes.

They produce the male sex cells called sperms and also produce male sex hormone testosterone.

Draw the diagram of Human Male Reproductive System from NCERT book.

The male main reproductive organs :

The main reproductive organ in males is a pair of testes.

They are present in scrotal sacs outside the body and contain seminiferous tubules as the structural and functional unit.

Male sex cells, sperms, are produced by seminiferous tubules and matured in the epididymis.

Leydig cells or interstitial cells present in between the seminiferous tubules secrete hormone testosterone.

Male accessory reproductive organs

- Several accessory reproductive organs that aid in the reproductive process.
- The prostate gland and the seminal vesicles are glands of reproductive system which make semen and nourish the sperms.

- Penis, having urethra passing through it, is called copulatory organ.
