## *Solution of a Pair of Linear Equations in Two Variables*

### Word Problems (Use Elimination Method)

**Solve for x and y.**

$$(I) \quad 7x - 2y/xy = 5 \quad (a)$$

$$8x + 7y/xy = 15 \quad (b)$$

**Solution:** Taking eqn. (a)

$$7x - 2y/xy = 5$$

$$\boxed{7x/xy - 2y/xy = 5}$$

$$\boxed{7/y - 2/x = 5} \dots (i)$$

Taking eqn. (b)

$$\boxed{8x + 7y/xy = 15}$$

$$\boxed{8x/xy + 7y/xy = 15}$$

$$\boxed{8/y + 7/x = 15} \dots (ii)$$

Let  $1/x = p$  and  $1/y = q$  in (i) and (ii) we get,

$$7q - 2p = 5 \dots (iii)$$

$$8q + 7p = 15 \dots (iv)$$

Multiplying equation (iii) by 7 and multiplying equation (iv) by 2 we get,

$$49q - 14p = 35 \dots (v)$$

$$16q + 14p = 30 \dots (vi)$$

Now, adding equation (v) and (vi) we get,

$$49q - 14p + 16q + 14p = 35 + 30$$

$$\boxed{65q = 65}$$

$$\boxed{q = 1}$$

Putting the value of q in equation (iv)

$$8 + 7p = 15$$

$$\boxed{7p = 7} \quad \boxed{p = 1}$$

Now,

$$p = 1/x = 1$$

$$\boxed{1/x = 1} \quad \boxed{x = 1}$$

$$\text{also, } q = 1 = 1/y$$

$$\boxed{1/y = 1}$$

$$\boxed{y = 1}$$

Hence,  $x = 1$  and  $y = 1$  is the solution.

*Do your Self*

$$(i) \quad 6x + 3y = 6xy$$

$$(iii) 3(x+2y) = 7xy$$

$$2x + 4y = 5xy$$

$$3(x + 3y) = 11xy, (x \neq 0 \text{ and } y \neq 0)$$

$$(ii) \quad \frac{7x-2y}{xy} = 5$$

$$(iv) \quad \frac{xy}{x+y} = \frac{6}{5}$$

$$\frac{8x+7y}{xy} = 15, \quad (x \neq 0 \text{ and } y \neq 0)$$

$$\frac{xy}{y-x} = 6 \quad (x \neq 0, y \neq 0 \text{ and } x \neq y)$$
