LIFE PROCESSES

Excretion System in Human Beings

Excretory/urinary system consists of :

- (1) The kidneys : The excretory organ
- (2) The ureters : The ducts which drain out urine from the kidneys
- (3) The urinary bladder : The urinary reservoir
- (4) The urethra : The channel to the exterior

Excretion

(i) The metabolic activities in the body generates many kinds of wastes including nitrogenous wastes which are harmful for the body and hence needed to be removed. Excretion is a process by which these wastes are removed from our body.

(i) Unicellular organisms remove these wastes by simple diffusion.
