*** Properties of Water ***

OBJECTS THAT FLOAT AND SINK

When we drop some objects in water , some of them sink while some others float over the water . The light objects , less dense than water , will float over Water . Mor dance and heavy objects will sink in water . Look around you in the room . When we drop paper plastic toy, wooden pencil , eraser , cloth piece and plastic bottle in water , all these float over water .

When you drop a coin , paper clip , needle , small stone , screw , steel spoon or fork , all these sink in water .

Don't write only read it

A. Answer these questions .

1. Why do some objects float on water ?

Answer = The light objects , less dense than water , will float over Water . Mor dance and heavy objects will sink in water .
