CONSERVATION OF ENERGY

The process of saving energy is called **conservation of energy**. Saving energy also reduces pollution and makes the environment healthy. Some of the ways to conserve energy are listed below:

- ❖ Turn off the lights when you are not using them.
- ❖ Use LED bulbs and tubes because they last longer and use lesser energy.
- ❖ Walk or take a public transport to go to nearby places.
- ❖ Use renewable sources of energy like solar energy and wind energy.

Use LED bulbs

Use a public transport

1. List five ways to conserve energy .

Answer = (I) Turn off the lights when you are not using them .

(ii) Use LED bulbs and tubes because they last longer and use lesser energy .

(iii) Walk or take a public transport to go to nearby places .

(iv) Use renewable sources of energy like solar energy and wind energy .

(v) Wash your clothes in cold water.
