Air pollution

All of us need air to breathe. The composition of air is fixed. Air pollution arises on mixing of some harmful substances in the air. It is very harmful for all living things.

Causes of air pollution-

- **Release of chemicals and poisonous gases from factories ,power plants, vehicles, cooking and burning of fuels.**
- **Bursting of crackers on festivals and weddings.**
- **Burning of plastic bags releases toxic gases.**

Methods to control air pollution-

- **We should plant trees. This helps in purifying the air.**
- **Factory should use filter chimneys so that harmful gases are not emitted directly into the air.**
- **Use a cycle to travel short distances.**
- **Garbage dumps must be kept covered.**
- **Burning of forests should be avoided.**

Homework-Write it clearly in your notebook.
