CHAPTER 2. TEETH

Dear students ,
The explanation of topic we will read today is :

KINDS OF TEETH :

Depending upon their function teeth can be grouped into four kinds:

1. Incisors :

In scissors are sharp and flat teeth in the front used for biting and cutting the food they are eight in number example 4 in each job they are also called **cutting teeth** .

2. Canines :

Canines can be seen on each side of the Incisor they are pointed and sharp and used for steering the food they are four in number example 2 in each job .

3 .Premolars :

Premolars are located next to the Canines they are 8 in all example

4 in each job their function is to crush and correct the food into small pieces they are also called **cracking teeth** .

4 .molars :

Molars located next to premolars and are broader than premolars they are twelve in number example 6 in each job they grinded and chew the food they are also called grinding teeth the last molar are also called **wisdom teeth**.
