ADAPTATION IN PLANTS

SUBJECT TEACHER-SONI KUMARI

In previous class we have completed ch – 4 ADAPTATION IN ANIMALS

Now we know about Adaptation in Plants .

Plants are found almost every where .

They can survive in water .

They can survive in hot deserts .

They can survive in freezing conditions of the polar region .

They are able to tolerate these conditions due to some special features :

Now we know about adaptation

The process of adjustment in a particular environment is called adaptation .

The specific place where a plant or an animal lives is called its habitat .

Don't write only read it .

A . Tick (✓) the correct answer :

1 . Which one is an example of desert plant ?

(a) Pine (b) Date palm ✓ (c) Banyan

2 . Plants growing in these areas have needle – like leaves .

(a) Mountains ✓ (b) Deserts (c) plains

HOME WORK

Do CW in HW .
