Chapter - 7

Air

The earth is surrounded by a thick layer of air called atmosphere . It extends to about 560 km around the earth . It is the part of our earth . As the earth moves the atmosphere moves , with it .

The atmosphere is made up of a number of layers of gases .

The lowermost layer of the atmosphere is the troposphere . It extends upto 15 km above the earth surface . We all breath air from this layer . Clouds are formed in this layer only .

The stratosphere is situated above the troposphere and exchange between 15 km

and 50 km from the earth' s surface . Jet aeroplanes flies in the stratosphere .

The layer above the stratosphere is called the ionosphere . No major human activity takes place in this layer of the atmosphere .

Don't write only read it.

A. Answer these questions .

1. What is atmosphere ?

Answer = The earth is surrounded by a thick layer of air called atmosphere . it extends to about 560 km around the earth . It is the part of our earth . As the earth moves ,the atmosphere moves with it .

**Do it in copy
and remember .**
