ADAPTATION IN ANIMALS

SUBJECT TEACHER-SONI KUMARI

We have already discussed about terrestrial animals and amphibians .

Now we know about Aquatic animal .

Animal that lives in water are called aquatic animals .

Fish , duck , crab , turtle etc . , are aquatic animals .

They have special features that help them to adapt their habitat :

They use their gills to breathe .

They have water proof bodies .

Their fins / paddle like limbs help them to swim .

They have streamlined body .

Ducks and water crows have webbed feet to swim and their flat and broad beak helps them to get food from mud .

Cranes and flamingos have long legs to help them wade in water .

Don't write only read it .

C . Cross (x) the odd one :

Arboreal animals

Amphibians

Monkey

Frog

Squirrel

Salamander

Gorilla

Toad

Chimpanzee

Bear x

Dolphin. x

Crow X
