

We have already discussed about Herbivores or Carnivores .

Now we know about Omnivores and Parasites .

OMNIVORES

The animals which eat Plants as well as flesh of animals are called Omnivores .

They have sharp teeth to tear flesh and flat teeth to grind food .

PARASITES

Parasites are the animals that live either on or inside the bodies of other animals .

They survive on blood only , for example , lice , mosquitoes , bugs , leech . etc .

Some worms like roundworms and tapeworms are also Parasites .

They live inside the intestine of animals .

Even human beings can become infected by tapeworms , if they eat food infected by these animals.

Don't write only read it .

D . Write short answers :

4 . What is migration ?

Ans : - Migration refers to the movement of birds from one region to another due to climatic changes and in search of food .

5 . Explain the term ' hibernation ' .

Ans : - The animals cannot tolerate cold weather and hide themselves in warm Places . They become inactive and go for long sleep . This is called hibernation .
