

UNIT - 1 PLANT LIFE

Leaf ---the food factory of PLANT

Dear Students,
From this lesson one , we will search to some hard word and we will also write the meaning of it together .

1. Herbs : very short plants with soft stem are known as **Herbs** , example : tomato , brinjal , Basil , Tulsi , Coriander , Mint.
2. Shrubs: Medium sized plants which are bushy with woody stems known as **Shrubs** , example : rose , sunflower , China rose, etc.
3. Trees : Plants which are very big with Woody stem are known as **trees** . example :Mango , Neem , Gulmohar , coconut tree .
4. Climber: some plants have very weak stem . They need support to climb and spread their leaves to

receive sunlight for their growth .these plants are known as **climber** : example :money plant , etc.

5. Nodes : a part on the stem where leaf arises .
6. Internode : the part of the stem between two successive is known as internode.
7. Photosynthesis : all leaves are green except a few leaves have a wonderful pigment called the chlorophyll it help in making food out of air water and sunlight by a process known as **photosynthesis**
8. Root system: the part of a plant that is underground it help in anchoring and absorption of water and Minerals from the soil .
9. Shoot system : the part of a plant that can be seen outside and help in bearing branches leaves and fruits .
- 10 . Glucose : the major food that is made by the plant during photosynthesis is glucose .
