CHAPTER 2. ---- THE SKELETAL SYSTEM

Dear Students,
Today, we will read more about what
is **GIRDLES** :

GIRDLES:

Girdles combine structure made up of several bones . A human body has two girdle ,example : **pectoral girdle and pelvic girdle .**

- **Pectoral girdle** : The pectoral girdle is a found in the upper part of the body . It forms shoulders , hence , it is also called the **shoulder girdle .**
- **Pelvic girdle** : The pelvic girdle is found in the Hip region (pelvis) ,so

it is also called the **hip girdle** .This girdle is very strong has provision to fit in the thigh bone beside wearing the weight of the whole body the greater protect kidney , urinary bladder , and reproductive organs .
