Interdependence In Living Beings

BALANCE IN NATURE

it is very necessary to maintain the balance between the number of plants and animals on the earth . Think , what will happen if the number of plants decreases in the environment . The animals will not get enough food and will die . In the same way , just imagine , what will happen if the number of animals increases in the environment . There will be excess of carbon dioxide and less oxygen . Such cases are harmful to the environment.

The balance in nature can be maintained by taking some simple measures :

- Avoiding deforestation**
- Prevented poaching**
- Planting more trees**

A. Choose the correct word .

- 1. Plants give out oxygen / carbon dioxide during photosynthesis .**
- 2. Herbivores / Carnivores eat plants .**
- 3. Omnivores / Scavengers eat dead animals and plants .**
- 4. Deforestation leads to decrease / increase in rainfall .**
- 5. Balance in nature can be maintained by preventing poaching / allowing poaching .**
