1. Article on corona virus.

Corona Virus

The coronavirus family causes illnesses ranging from the common cold to more severe diseases such as severe acute respiratory syndrome (SARS) and Middle East respiratory syndrome (MERS), according to the WHO.

The new coronavirus has been named COVID-19.

symptoms

Common signs of infection include fever, coughing and breathing difficulties. In severe cases, it can cause pneumonia, multiple organ failure and death.

The incubation period of COVID-19 is thought to be between one and 14 days. It is contagious before symptoms appear, which is why so many people get infected.

protection

The WHO recommends basic hygiene such as regularly washing hands with soap and water, and covering your mouth with your elbow when sneezing or coughing.

Maintain "social distancing" - keeping at least 1.8 metres (six feet) between yourself and others - particularly if they are coughing and

sneezing, and avoid touching your face, eyes and mouth with unwashed hands.

Avoid unnecessary, unprotected contact with animals and be sure to thoroughly wash hands after contact.

H.W write and remember it.
