VIDYA BHAWAN BALIKA VIDYAPEETH

STUDY MATERIAL SCIENCE CLASS-VI

Date: 09/09/2020 Teacher: Poonam Kumari

▶ 7. Getting to know plants

- Node: Places where leaves and branches are joined to stem are called nodes.
- Internode: The part of stem between two nodes is called internode.

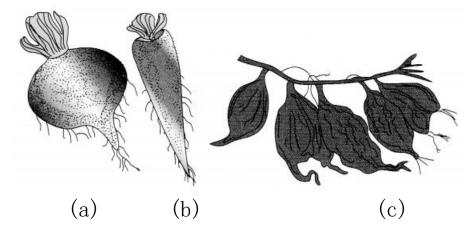

• Function of leaves:

- **Transpiration**: It is the process of evaporation of water from the surface of leaves.
- Photosynthesis: Green leaves synthesize food with the help of sunlight, air and water by a process called photosynthesis.

• Roots:

- Roots are mostly the underground part of the plant.
- They absorb water and mineral from the soil.
- They hold the soil firmly to keep the plant upright.
- Some roots store food and become plump.

Modified roots of (a) beet, (b) carrot & (c) taproot
