STUDY MATERIAL SCIENCE

CLASS-VI

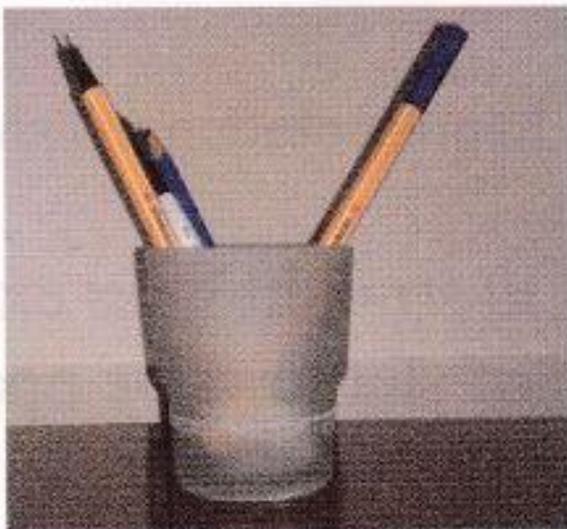

Date : 11-02-2021

Teacher : Poonam Kumari

▸ Light, shadow, Reflection

Materials that allow light to pass through them, but scatter or diffuse the light as it passes through, i.e., a parallel beam of light comes through in all directions are called translucent materials . That is why an object cannot be seen clearly through a translucent material.

Examples of translucent materials are butter paper, a frosted glass, paper smeared with oil, and smoked glass.

(b) Translucent material
