STUDY MATERIAL SCIENCE

CLASS-VI

Date : 20-02-2021

Teacher : Poonam Kumari

▸ Light, shadow, Reflection

• Reflection Surfaces

We say light is reflected when it bounces off a surface. Reflection of light helps us to see most of the things around us.

Reflection of light by a surface depends on the nature of the surface.

A rough and bumpy surface (also called an irregular surface) reflects a parallel beam of light incident upon it in different directions.

A good example of a rough surface is bark of a tree and blanket. This kind of reflection is called diffused reflection.
