Subject Geography

Chapter: WATER

3/4th of earth's surface is covered by water, so the earth is called the blue planet.

The sun's heat causes evaporation of water vapour. When the water vapour cools down, it condenses and forms clouds. From there, it may fall on the land or sea in the form of rain, snow or sleet.

The process by which water changes its form and circulates between oceans, atmosphere and land is known as the water cycle.

Our earth is like a terrarium.

The major source of fresh water are the rivers, ponds, springs and glaciers.

The ocean bodies and the seas contain salty water.

Distribution of Water on Earth

About three-fourths of the earth's surface is covered by water.

On earth 97% of water is saline and 3% of water is fresh water.

Read the above passage thoroughly and try to understand and give the answer of the following question :

Q.1.What is Blue Planet?

2.What is Water Cycle?

3.Name the major source of Water?

4.What is the percentage of water Earth surface covered?
