Forests

Tropical Evergreen Forests

Tropical Evergreen forests are also called tropical rainforests. These thick forests occur in the regions near the equator and close to the tropics. These regions are hot and receive heavy rainfall throughout the year. As there is no dry season, the trees do not shed their leaves. This is the reason they are called evergreen. The thick canopies of the closely spaced trees do not allow the sunlight to penetrate inside the forest even in the day time. Hardwood trees like rosewood, ebony, mahogany are common here.

Tropical Deciduous Forests

Tropical deciduous are the monsoon forests found in the large part of India, northern Australia and in Central America. These regions experience seasonal changes. Trees shed their leaves in the dry season to conserve water. The hardwood trees found in these forests are Sal, teak, neem and shisham which are used to make furniture, transport and constructional materials. Tigers, lions, elephants, langoors and monkeys are the common animals of these regions.

Temperate Evergreen Forests

The temperate evergreen forests are located in the mid latitudinal coastal region. They are commonly found along the eastern margin of the continents, e.g., In south-east USA, South China and in South-East Brazil. They comprise both hard and softwood trees like oak, pine, eucalyptus, etc.

READ THE ABOVE ARTICLE CAREFULLY AND TRY TO UNDERSTAND AND GIVE THE ANSWER OF THE FOLLOWING QUESTIONS

1.WHAT IS TROPICAL RAIN FOREST?

2.WHY TROPICAL RAIN FORESTS CALLED THE EVERGREEN FOREST?

3.NAME THE IMPORTANT ANIMALS AND TREES ARE FOUND IN DECIDUOUS FORESTS.

4.DISTINGUISH BETWEEN TROPICAL DECIDUOUS FOREST AND TEMPERATE EVERGREEN FOREST .
