

VIDYA BHAWAN BALIKA VIDYAPEETH

STUDY MATERIAL SCIENCE CLASS-VII

Date : 10-04-2021

Teacher : Poonam Kumari

▶ Nutrition in Plants

▶ LEAVES OF DIFFERENT COLOURS :

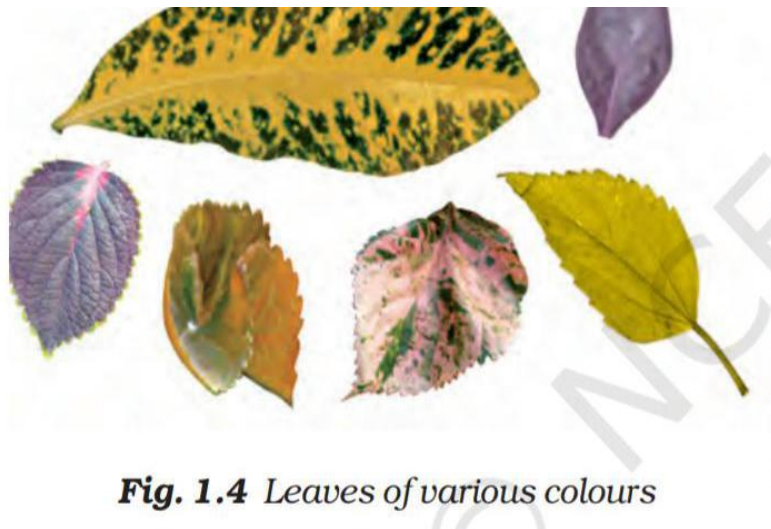

Fig. 1.4 Leaves of various colours

The leaves other than green also have chlorophyll. The large amount of red, brown and other

pigments mask the green colour (Fig. 1.4). Photosynthesis takes place in these leaves also.

▶ **Algae:**

- Green patches in ponds or stagnant water bodies are generally formed by the growth of organisms called algae.
- They contain chlorophyll which gives them green colour.
- They can also prepare their own food by photosynthesis.
