▸ Weather, climate & Adaptations of animals

Animals that live in a very cold or hot climate must possess special features to protect themselves against extreme cold or heat.

The features and habits that help an animal to adapt to their surrounding are a result of the process of evolution.

According to their habitat animals adapt themselves.

These animals may be grouped as polar region and tropical rainforest animals.

The Polar Regions

The polar regions as the name suggest are situated near the poles, i.e. north pole and south pole. The countries that belong to the polar regions are Canada, Greenland, Iceland, Norway, Sweden, Finland, Alaska in USA and Siberian region of Russia.
