Ch5-Water(Geog.)

The earth is considered as an Unique planet.

Water Cycle

Water continually changes its form. The heat of the Sun evaporates water & changes it into water vapour. The water Vapour being warm, rises, high & gradually cool down & condenses to form clouds. This causes rain, snowfall, hail storm & the water returns to the earth falling on land or sea etc. Water that falls on land collects in rivers which carry it back to the oceans. This continuous movement is called the water cycle.

Man must take efforts to conserve this precious resources.

Conservation of Water

Water is renewable, recyclable resource-yet it is becoming scarce. We must take strong resolve to conserve water.

Every year we celebrate 22 March as World Water day.

Way to conserve water

- **Ensure all taps & appliances are in order.**
- **Avoid flushing trash in the toilet.**
- **Use a bucket for watering plants.**
- **Use water in which fruits & vegetables have been washed to water potted okants**
- **Make rain water harvesting**
