

VIDYA BHAWAN BALIKA VIDYAPEETH

STUDY MATERIAL SCIENCE

CLASS-VIII

Date : 07-01-2021

Teacher : Poonam Kumari

▶ Cells : Structure & Function

Cytoplasm :

The cytoplasm is a part of a cell that enclosed within the cell membrane. It surrounds a made of and jelly-like substance in which many other component, or organelles, of the cell are present. The organelles include much smaller components of the cell such as the mitochondria, Golgi boidies, ribosomes, etc.

Cell membrane :

The cell membrane is also known as the plasma membrane It separates cells from one another and also protect the cell from the outside environment. It also regulates the movement of water, nutrients and wastes into and out of the cell.
