Chapter:- 3. ADVANCED FEATURES OF ACCESS 2013

CLASS- VIII^H   SUB TEACHER :- VIKASH KR. RAJAK

SUBJECT:- IT   DATE :-   02/06/2020

📖 **Topic :- Inserting Images,**

➤ **INSERTING IMAGES (<IMG>TAG):-**

Images enhance the overall appearance of a webpage. Images make the websites look interesting. While designing the webpages, you should maintain a balance between the use of text and images. However, excessive use of images may slow down the download of a webpage. The image file formats that are supported by most web browsers include GIF, JPEG and PNG.

In HTML, the images are inserted using the <IMG> tag. It is an empty tag.

Attributes of <IMG> tag

Attribute	Description	Example
src	This attribute is used to specify the URL or the path of the image to be displayed.	`<IMG src="flowers.jpg">`
height, width	These attributes are used to specify the height and width of the image in pixels.	`<IMG height="200" width="200">`
align	This attribute is used to align the image with respect to the margins or the inline text. • Use **left** or **right** value to align the image with respect to margins • Use **top**, **middle** and **bottom** to align the image with respect to inline text	`<IMG align="right">`
alt	This attribute is used to specify an alternative text that a browser will display if the image cannot be displayed.	`<IMG alt="flowers image">`
border	This attribute is used to specify the width of the border around an image.	`<IMG border="6">`

☞ **The following HTML code uses different attributes of the <IMG> tag to display the output. The output of the above code is as follows.**

```
