Ch3-Our Changing Earth(Geog.) Revision

- **The hydrosphere on the earth helps sustain life in the biosphere. It is maintained by water cycle.**
- **The hydrological or water cycle involves four processes- evaporation, condensation, precipitation and collection.**
- **The five oceans-Pacific Ocean, Atlantic, Indian, Arctic and the Antarctic-constitute the principal component of hydrosphere.**
- **The major movements in oceans are in the form of waves, tides and currents.**
- **Water conservation is crucial for the survival of mankind.**
- **The broad, slow moving masses of water is called drift.**
- **The horizontal distance between two successive crest is called wavelength.**
- **The rhythmic rise and fall in the level of sea water is known as tides.**
